

What Is JavaScript?

JS is a programming language. We use it to give instructions to the computer.

Our 1st JS Code

Console.log is used to log (print) a message to the console

```
console.log("Apna College");
```

Variable Rules

- Variable names are case sensitive; “a” & “A” is different.
- Only letters, digits, underscore(_) and \$ is allowed. (not even space)
- Only a letter, underscore(_) or \$ should be 1st character.
- Reserved words cannot be variable names.
